Will you SCIP the database?

MANAGING THE SUBSTANCE REPORTING OBLIGATIONS OF THE SCIP DATABASE

Arcadis supports enterprises to fulfill the reporting obligations into Europe’s SCIP database

SCIP DATABASE SOLUTIONS

- Is your company placing products on the European market?
- Do any of these products or their parts contain Substances of Very High Concern (SVHCs) above 0.1% w/w?
- Do you have an IT system in place to trace the composition of your products?
- How do you ensure that your company meets the SCIP database requirements in an efficient way?

If you place products on the European market which contain SVHC’s in a concentration above 0.1% w/w, then you need to submit information into Europe’s SCIP database as from January 5th, 2021.

The 0.1% threshold is to be calculated on component level.

This means that-for instance- exceeding this threshold in a single pin of a resistor somewhere in a device put on the European market is already triggering this obligation.

Depending upon various factors such as product portfolio, business type, sourcing strategy and organization, this reporting can be either straightforward or a complex and time-consuming exercise which is preferably embedded in an organizational structure.
ARCADIS EXPERIENCE
We deliver supply chain solutions to multiple clients across a variety of business sectors.

- We help quantify the impact of the SCIP obligations based upon your portfolio, business, and organization.
- We offer data gap analysis enabling decision making for efficient and targeted supply chain actions.
- We support in focused global supply chain data collection, reducing the cost of analytical testing.
- We assist in fulfilling the SCIP reporting obligations by performing them on your behalf.
- We provide support in choosing the right digital solutions to manage documentation of product compliance from product design to end of life in line with your company needs.

OUR STEPWISE APPROACH

1. Prepare
2. Implement
3. Deploy
4. Reinforce

REGULATORY EXPERT ADVICE
Our approach is flexible and can be applied to achieve compliance with other substance regulations such as RoHS, Medical Device Regulation, California Prop 65, CLP,…
